Expert Pharmaceutical Compounding Consultants

We solve problems to save
your business time and money.

www.restorehealthconsulting.com

ABOUT RESTORE

We offer a full range of regulatory compliance, quality assurance, and operations consulting services to firms engaged in pharmaceutical compounding. We work with hospitals, pharmacies, outsourcing facilities, manufacturing companies, law firms, and investment firms concerned with all things compounding.

Our team is comprised of industry experts from multi-disciplinary backgrounds ranging from GMP manufacturing to pharmacy compounding.

HOW WE WORK

For every project we follow a simple three step process:

1

DISCOVER

Discover your project needs, timeline, and budget.

2

SELECT

Select the most qualified associate(s).

3

DELIVER

Deliver solutions that custom fit your business.

WHAT WE DO

ON-SITE PERSONNEL TRAINING

We provide on-site training in USP <797>, USP <795>, USP <800>, and 21 CFR 211 so compounding staff may be trained to their specific procedures on their own equipment. Schedule your next training today.

SOPs, MEDIA FILL, & PROCESS VALIDATIONS

It's not enough to purchase and adopt cookie-cutter compounding SOPs and media fill protocols. Your procedures must be detailed and applicable to your unique facility operations and regulatory requirements. Let us customize your SOPs, master formulas, and protocols to maintain compliance with applicable regulations and accreditation standards.

REGULATORY COMPLIANCE

If your organization has been hit with a 483, warning letter or accusation, we can help you respond quickly with cost-effective remediation plans that adequately address the problems. We also provide expert witness depositions, testimony, evidence review, and probation monitoring for escalated issues. Get ahead of an audit with our cGMP, FDA, DEA, BoP, USP, PCAB, and TJC compliance assessments.

CLEANROOM DESIGN OR RENOVATION

We take the guess work out of designing a compliant cleanroom facility that is engineered well to produce quality compounds and prevent contamination.
